

CLEANING AND MAINTENANCE

GENERAL ADVICE

Exposure to direct light should be avoided, as ultraviolet rays can cause discoloration of materials. In addition to the type of material, the weave and aesthetic characteristics of the fabric, the technical properties also play an important role, such as resistance to abrasion, fading, and staining.

FABRICS

Cat. B - BONDAI

Care and washing

Wash at a maximum temperature of 60°C

Do not tumble dry

Iron at medium temperature max 120°C

Tetrachloroethylene washing - Normal washing

Cat. H - MADRID 3D

Care and washing

Wash at a maximum temperature of 60°C

Don't bleach

Natural drying process - Hanging with dripping

Do not iron

Do not dry clean

Cat. H - BOSS FR

Care and washing

Don't wash - Clean with a soft damp cloth and neutral soap

Non-chlorine bleach allowed

Do not tumble dry

Iron at medium temperature max 110°C - Iron inside out with a damp cloth in between

Wash at a maximum temperature of 60°C

Do not tumble dry

Iron at medium temperature max 120°C

Tetrachloroethylene washing - Normal washing

MELAMINE

To clean, use a damp cloth to remove dust and light dirt. For stains, apply a neutral detergent or household degreaser, then rinse with water and always dry thoroughly. It's important to act promptly when liquids are present, drying them immediately to prevent absorption and staining. Do not use products containing denatured alcohol, ammonia, concentrated acids or alkalis. Avoid direct contact with sharp or pointed tools that could damage the surface.

VENEER

Veneer surfaces should be cleaned using a microfiber cloth slightly dampened with water. It is advisable to add a mild household detergent to the water. After cleaning, always dry thoroughly to prevent water from pooling. Avoid using harsh products containing ammonia, alcohol, fabric softeners or abrasive agents. Promptly remove any liquids or residues to prevent absorption and the formation of permanent stains. For proper maintenance, we recommend applying a specific furniture care product once or twice a year, carefully following the instructions and only after thoroughly cleaning the surface. However, frequent or uncontrolled use of such products may cause them to penetrate the protective paint film, resulting in unwanted stains. Therefore, we recommend avoiding excessive use.

HPL

To clean HPL surfaces, use a damp microfiber cloth to remove dust and light dirt. For stains, use a non-abrasive sponge along with a neutral detergent or household degreaser. After cleaning, rinse with warm water and dry thoroughly with a soft cloth or paper towel. Avoid using abrasive sponges, sandpaper, steel sponges and sharp or pointed tools. Do not use abrasive cleaners, concentrated acidic or alkaline products, waxes or polishing agents.

FENIX

Clean the surface with a microfibre cloth dampened with neutral soap or a household degreaser. After cleaning, rinse with water and dry thoroughly. To remove stubborn stains, you can use a sponge. You can also use denatured alcohol or ammonia, provided they are suitably diluted. Avoid using abrasive detergents and sponges, sandpaper, steel sponges or other unsuitable tools. Do not use products with a high acid or alkaline content, as they may stain or damage the surface. Furniture cleaners and those containing wax should also be avoided.

GRES

To clean gres surfaces, use a microfiber cloth soaked in neutral or slightly acidic soap, or a household degreaser. Act promptly by drying any liquid deposits to prevent absorption and the resulting formation of stains. Do not use abrasive detergents or sponges, or unsuitable tools such as sandpaper or steel sponges. Avoid using concentrated acidic or alkaline detergents, furniture cleaners or any products containing wax.

QUARTZ (marble agglomerate)

To clean quartz surfaces use a microfibre cloth or a non-abrasive sponge dampened with a neutral detergent or household degreaser to remove dust and dirt.

To polish or restore the surface's shine, we recommend using specific products for cleaning marble and natural stone. Avoid using abrasive sponges, sandpaper, steel sponges and sharp or pointed tools that could scratch the surface. Do not use acidic or alkane detergents, waxes or furniture products.

POLYPROPYLENE

To clean polypropylene parts, use a microfiber cloth soaked in mild soap diluted in water, then rinse with clean water. Steam, denatured alcohol and ammonia may also be used. Avoid using paper towels, abrasive sponges or granular detergents, as they may scratch the surface.

STEEL

- painted steel: clean with a microfibre cloth dampened with neutral soap, household degreaser, alcohol or specific metal cleaning products. Rinse with water and dry thoroughly after each cleaning. Avoid using abrasive, powdered (granular) detergents and solvents of any kind;

- chrome-plated steel: clean with a microfibre cloth dampened with neutral soap or household degreaser. Rinse with water and always dry after cleaning. Do not use alcohol, ammonia, abrasive or granular detergents or solvents in general.

ALUMINIUM

To clean aluminium structures, use a microfibre cloth dampened with neutral soap or a household degreaser. After cleaning, rinse thoroughly with water and always dry the surface. Avoid using powdered detergents, abrasive products, concentrates, acids or alkalis, which could damage the material.

GLASS

To clean glass surfaces, we recommend using a microfibre cloth together with specific detergents, applying them with circular movements to avoid streaks. Denatured alcohol or ammonia can also be used. Avoid using abrasive sponges, sandpaper, steel sponges and unsuitable materials that could damage the surface. Do not use sharp or pointed tools directly on the glass. Concentrated acidic or alkaline detergents, furniture products and those containing wax should also be avoided.
