TAKK

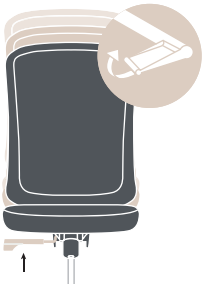

Takk White Fabric - Task chair

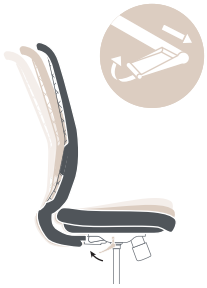

TECHNICAL DETAILS

backrest	in white nylon, covered with stretch polyester mesh cover appropriately tensioned and covered with fabric or eco-leather at the front, with height-adjustable lumbar support (60 mm). It allows to personalise the contact between the backrest and the back of the user, particularly in the lower back area, following the natural curves of the spine. Nylon backrest/seat connection. Available with or without headrest. 
seat	in plastic with steel reinforcement bars, anatomically shaped polyurethane foam padding and white polypropylene under-seat cover.
headrest	fixed
armrests	1D adjustable: (height 60 mm) in white nylon with black armpads. 

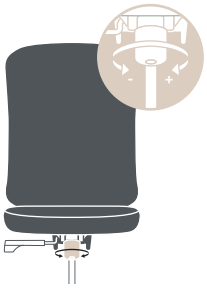

device	synchronised lockable in 3 positions with frontal adjustment of the backrest resistance in relation to the user's weight and anti-shock backrest release system. This mechanism dynamically follows all the natural movements of the user's body; seat and backrest tilt together, relieving tension on the dorsal muscles. The movement tension is adjustable, adapting to the user's body shape and preferences. The correct seat/back tilt angle ensures proper blood flow while reducing the feeling of heaviness in the lower limbs. A soft release system allows the user to control the movement of the backrest when released.

Right lever adjusts the height of the seat

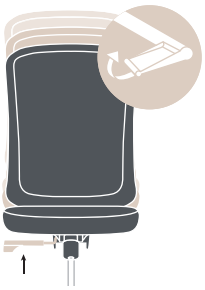

The same lever locks the backrest in 3 positions

Central pommel adjusts the backrest's spring tension

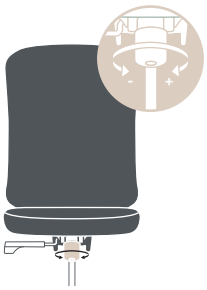

device	synchronised lockable in 3 positions with seat depth adjustment (60 mm), with frontal adjustment of the backrest resistance in relation to the user's weight. Anti-shock backrest release system. This mechanism dynamically follows all the natural movements of the user's body; seat and backrest tilt together, relieving tension on the dorsal muscles. The movement tension is adjustable, adapting to the user's body shape and preferences. The correct seat/back tilt angle ensures proper blood flow while reducing the feeling of heaviness in the lower limbs. A soft release system allows the user to control the movement of the backrest when released. The seat depth adjustment provides adequate support for people of different heights and build. The seat can slide forward and backward to change the thigh support base as desired, providing a dynamic alignment of the position of the legs.

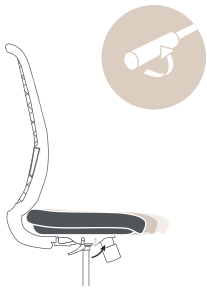

Right lever adjusts the height of the seat

The same lever locks the backrest in 3 positions

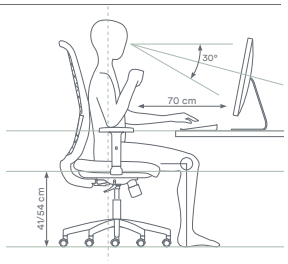

Central pommel adjusts the backrest's spring tension

Front right lever adjusts seat depth

height adjustment	by gas lift. Allows an excursion of 13 cm.
base	5-star base in white nylon or die-cast aluminium. Self-locking dual-tread rubbered swivel castors, for hard floors, Ø 65 mm standard (Ø 50 mm for aluminium base)
ergonomics	Takk is equipped with the necessary mechanisms for correct and comfortable use, even for prolonged periods, provided that the following conditions are met: the standard sitting position requires the maintenance of angles of 90° between the torso and thigh, between the thigh and leg and between the leg and foot. These last two angles are essential so that the foot, resting completely on the underlying surface, can unload part of the weight of the lower limb onto it, avoiding excessive compression on the posterior surface of the thigh and favouring the return of the blood circulating in the leg veins towards the heart.
